

PLASMA DONOR APPLICATION USING CLOUD APPLICATION DEVELOPMENT

Problem Statement:

People who are in need of plasma are increasing day by day, but they don't have the idea about where to find donor. Even the donors have no idea where they can donate.

1. What problems can donating plasma cause?	1. Fatigue. 2. bleeding. 3. Dehydration etc...
2. Why would plasma be rejected?	Certain chronic illness, such as hepatitis and HIV, automatically disqualify someone from donating.
3. What is the issue?	1. Transmit diseases. 2. Discomfort. 3. Need of donor.
4. When does the issue occur?	1. No Proper health checkup. 2. Changes in health condition of the patients.

5. Why it is important that we fix the problem?	Reach the donors on time and get a healthy plasma cell from the donor to recover the patient.
6. What methodology used to solve the issue?	1. Monitoring patient's health condition. 2. Updating donor's body condition.
7. Where does the issue occur?	Patients have no idea from where to get the plasma which results in time delay .
